1 About

The [Training Catalogue](#)¹ is a web-based tool to discover and manage training resources in the downstream space sector. It allows you to explore both Training Materials (such as slides, documents or online modules) and Training Actions (such as workshops, courses or webinars).

The catalogue presents resources in a tabbed view, where you can switch between Training Materials and Training Actions. Items are displayed as cards with key information, such as the title, provider, target audience, EQF level and main topics, together with filters and sorting options that support efficient exploration.

Each resource has a dedicated detail page that shows all its information, including a description, learning outcomes, target audience, language, links to the original resource and related Body of Knowledge (BoK) topics. From the detail view, you can also download a semantic representation of the metadata in RDF formats (Turtle, RDFa and RDF/XML) for use in other systems.

The Training Catalogue is part of the SpaceSUITE ecosystem of tools and was developed by the [Geospatial Technologies Research Group \(GEOTEC\)](#)² from the Universitat Jaume I, Castelló de la Plana, Spain, in the context of the ERASMUS+ project [SpaceSUITE](#)³.

²<http://geotec.uji.es/>

³<https://www.spacesuite-project.eu/>

2 Anonymous users, login & registration

You can browse the Training Catalogue without logging in. As an anonymous user, you can navigate through the Training Materials and Training Actions, use filters and sorting, and open the detail pages of any public resource, including downloading the RDF files.

If you want to create, edit, or manage Training Materials and Training Actions for your organization, you need to log in with a SpaceSUITE account.

Figure 1 shows the login window used across the SpaceSUITE tools, including the Training Catalogue. If you already have an account, enter your email (1), your password (2) and click the “Login” button (3). If you forgot your password, type your email (1) and click “Forgot password?” (4) to receive an email with instructions to recover it. If you do not yet have an account, click “Register” (5). You can also sign in with your Google account (6).

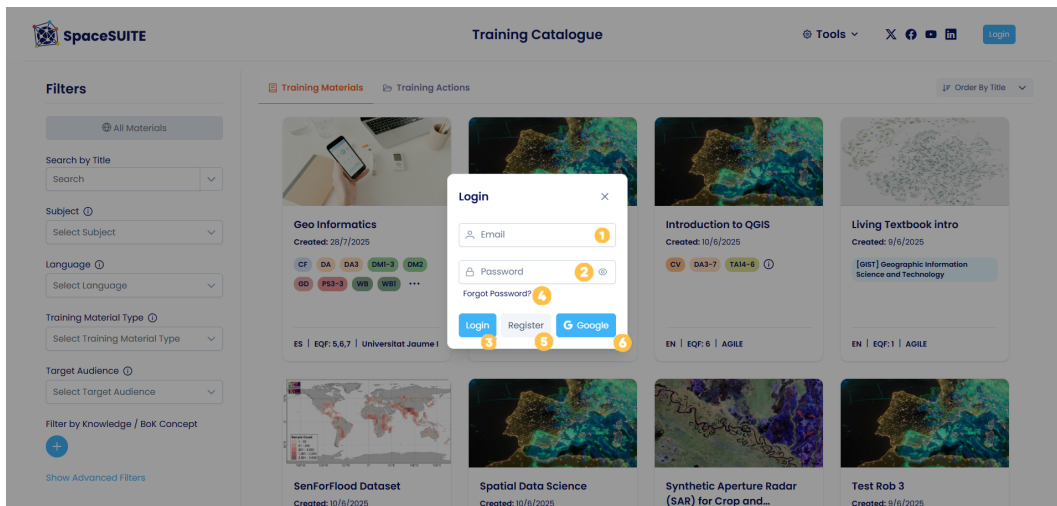

Figure 1: SpaceSUITE Tools login modal.

To create a new account, fill in your email (1), your password (2) and repeat your password (3). The password must contain at least 6 characters. Then click the “Register” button (4) and you will be redirected to the home page of the Training Catalogue.

When registering, if you see the error ‘The email address is already in use by another account’, it means your email is already registered. Write your email in the login part of the form and click ‘Forgot password?’ to receive a link with instructions to recover it.

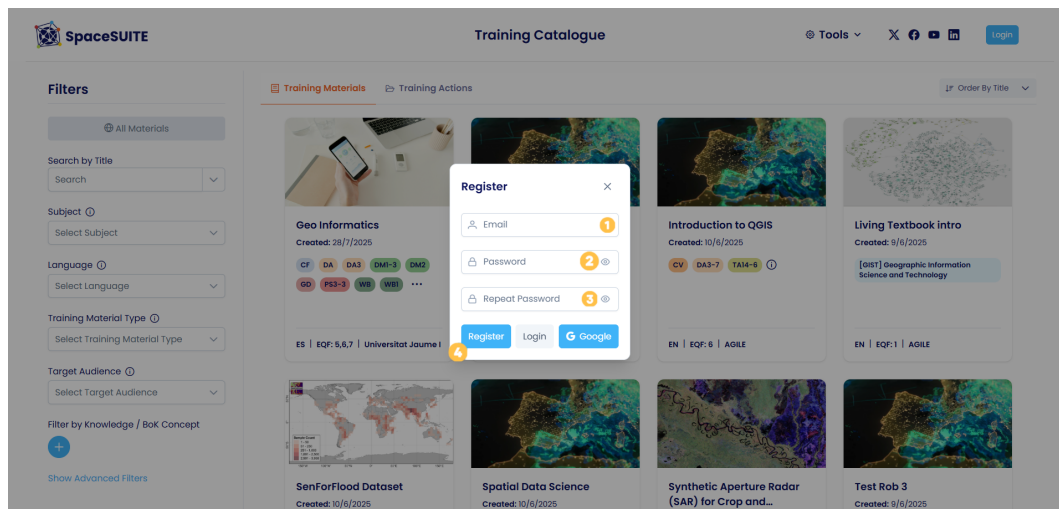

Figure 2: SpaceSUITE Tools register modal.

3 User details and organizations

As can be seen in Figure 3, after logging in you will see an icon with your initial in the navigation bar (1). Clicking on this icon opens a menu where you can choose between the *Profile*, *Organization* and *Logout* options (2).

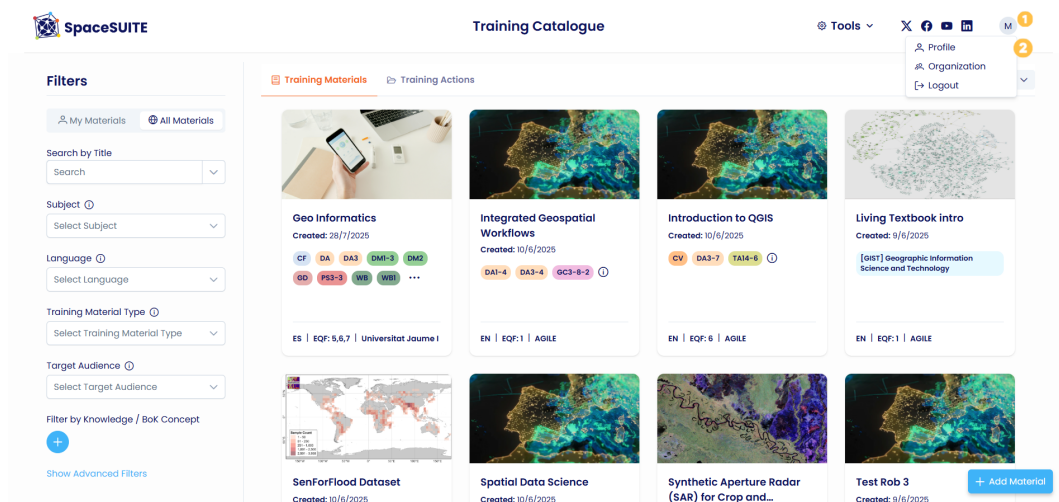

Figure 3: SpaceSUITE Tools navigation bar.

The *User Profile* section (Figure 4) allows you to view and update your personal information. Your email address is displayed in a non-editable field (1), while your name can be modified in the editable field below (2). After making any changes, click the *Update Name* button to

save the updated information (3).

The image shows a 'User Profile' form. It has two input fields: 'Email' with an envelope icon and 'Name' with a person icon. Both fields contain redacted text. Below the 'Name' field is a blue button labeled 'Update Name'. Three orange circular callouts with numbers 1, 2, and 3 point to the 'Email' field, the 'Name' field, and the 'Update Name' button respectively.

Figure 4: SpaceSUITE profile page.

As shown in Figure 5, the *Your Organization(s) Details* section allows you to manage your organizations. You can join an existing organization by selecting it from the dropdown menu (1) and clicking the *Join Organization* button.

Below the dropdown, you see the list of organizations you belong to, with information such as the organization name (2) and description (3). Each organization entry includes buttons to copy the organization email (5) and to leave the organization (6). You can also create a new organization by clicking the *Create New Organization* button at the bottom of the page (7). If you are an administrator of an organization, you will see the *Admin Content* button (4), which opens the administrator panel.

The image shows the 'Your Organization(s) Details' page. At the top, it says 'You are part of 3 organization(s). You can also create your own organization.' Below this is a dropdown menu labeled 'Select an Organization' with a callout 1, and a blue 'Join Organization' button. A list of organizations follows: 'Universitat Jaume I' with callout 2, 'Geotec UJI' with callout 3, and 'SpaceSuite' with callouts 5 and 6. Each organization entry has an 'Admin Content' link (callout 4) and a 'Copy Email' icon (callout 5). At the bottom is a 'Create New Organization' button with a plus icon and callout 7.

Figure 5: SpaceSUITE organizations page.

In the organization administrator panel (Figure 6), you can manage a specific organization. The left side shows editable fields for the organization name (1), description (2) and contact email (3); click *Update Information* to save any changes (4).

To better structure the content of your organization in the Training Catalogue, you can create *Divisions*. Administrators can add new divisions by entering a name and clicking *Add Division* (5), and remove existing divisions using the delete icon (6). A *Delete Organization* button is available at the bottom for permanent removal of the organization (7).

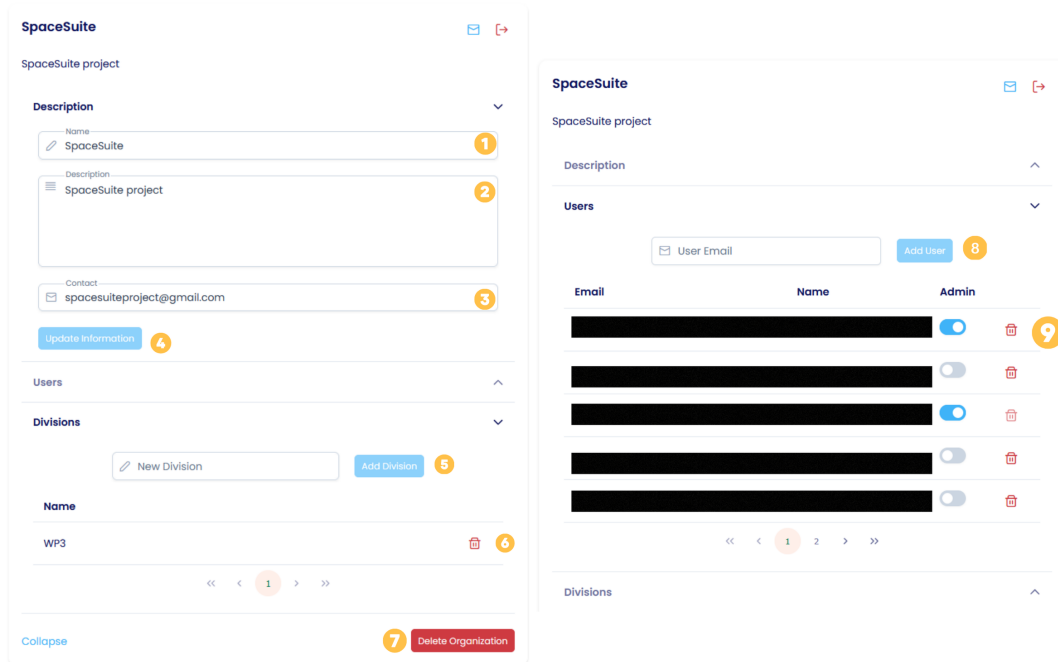

Figure 6: SpaceSUITE organization admin panel.

You can also manage the members of your organization. To add a user, type the email address they use to log in and click the *Add user* button (8). Existing users are listed with their email, name, an admin toggle and a delete icon (9), which allows administrators to change a user's role or remove them from the organization.

4 Main view

Figure 9 shows the main view of the Training Catalogue. This interface provides a complete environment for discovering Training Materials and Training Actions through tabbed navigation, card-based presentation, integrated filters and pagination.

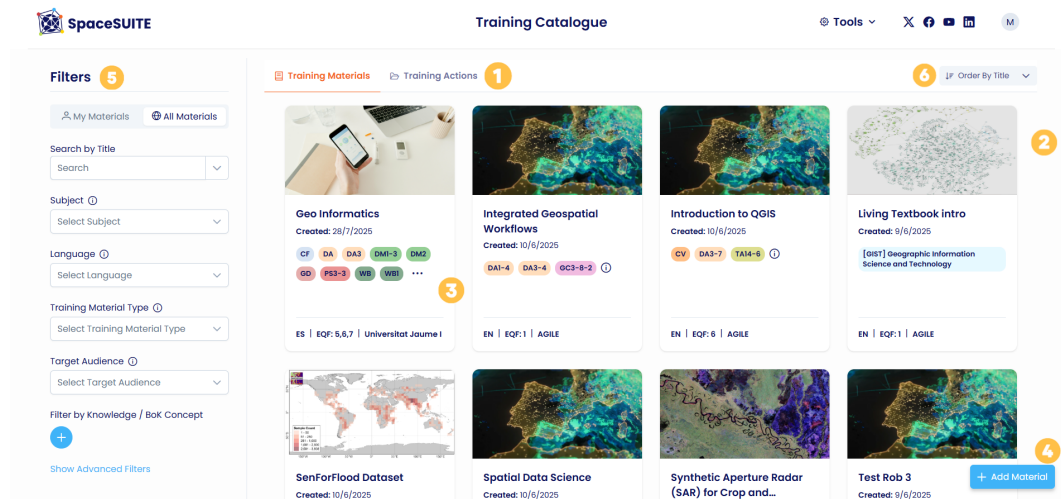

Figure 7: Training Catalogue main view.

4.1 Tabs and resource cards

Two tabs let you switch between *Training Materials* and *Training Actions* (1). The active tab (highlighted in orange) shows a responsive grid of resource cards (2). Each card displays the title (click to open the detail view), provider name, EQF levels the resource is targeting, the language of the resource, and colored BoK concept tags (3).

BoK tags combine knowledge areas and specific concepts annotated from the GeoSpace BoK (custom tags are not shown). Three display modes are used according to the available space:

- **Full tags:** code + complete name when space allows.
- **Code only + info icon:** abbreviated codes with “i” icon when full names don’t fit; click “i” to open popover with full tag list.
- **Truncated + ellipsis:** partial list with “...” when even codes don’t fit; click “...” to open popover with complete list including full names.

Logged users have a floating *Create* button in the bottom-right corner that creates new materials or actions matching the active tab (*Training Materials* or *Training Actions*) (4).

Pagination controls at the bottom allow navigation through large result sets.

4.2 Filters panel

The left filters panel combines main and advanced filters in a single interface (5). Main filters provide quick access to common criteria such as search by keywords, subject areas, etc. Advanced filters extend this with detailed metadata properties like specific EQF levels and delivery modes.

Logged users can use an extra filter to show only their own organization's resources. Filters are applied immediately and cumulatively as you make selections: combine keyword search with subject filtering, then narrow further by audience or BoK concepts. The card list updates in real time to show only matching resources. To remove filters, use individual clear buttons. This progressive filtering approach makes it easy to discover relevant training resources efficiently.

4.3 Sorting

A sorting dropdown positioned to the right of the Training Materials/Training Actions tabs lets you reorder the card list (6). Available options include:

- **Title:** alphabetical order (A-Z or Z-A).
- **Creation date:** newest first or oldest first.
- **EQF level:** from basic to advanced.

The list reorders immediately when you select a new sorting criterion, helping you quickly prioritize recent resources, browse alphabetically or group by difficulty level. Sorting works together with active filters and applies to the current page of results.

5 Detail view

Clicking on the title or image area on any card opens the detail view of that Training Material or Training Action. This dedicated page presents all the descriptive information, educational metadata and access details of the resource in a structured, easy-to-scan layout. Both Training Materials and Training Actions use the same page template, with content adapting to the specific nature of each resource type.

At the bottom of the page, two action buttons provide management options for authorised users: a blue *Edit* button to modify the resource details, and a red *Delete* button to permanently remove it from the catalogue. These buttons appear only when you have the necessary permissions for the resource or organization.

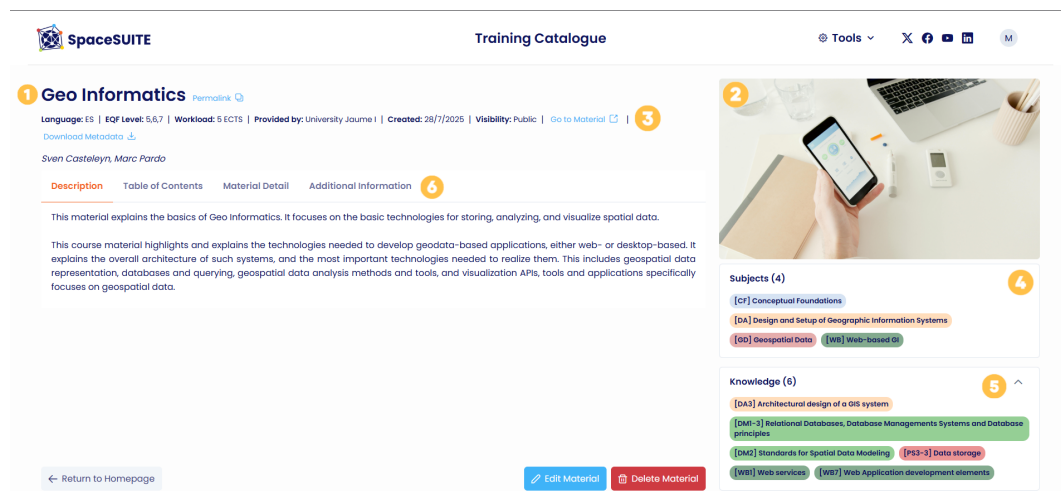

Figure 8: Training Catalogue detail view.

5.1 Header and image section

The page opens with a prominent header that displays the resource title (1), typically spanning the entire width. Immediately below, an image or representative visual provides visual context (2); for example, a screenshot of slides for a Training Material, or a photo of participants/venue for a Training Action.

Key summary information appears below the title, including the language, EQF level, workload (in ECTS credits), provider/organization name, creation date, visibility status (private or public), direct URL to the material, and RDF download options in three formats: RDFa, RDF/XML and Turtle (3).

Below the image, two sections appear: **Subjects** and **Knowledge**. The Subjects section is always visible and displays BoK knowledge areas as full-text colored tags (4). The

Knowledge section can be expanded or collapsed and shows annotated BoK concepts as full-text colored tags, plus any custom tags provided by the resource creator (5).

5.2 Detailed description

The main body of the detail page uses tabs to organize detailed information into four categories: *Description*, *Table of Contents*, *Material/Action Detail* and *Additional Information* (6). This tabbed interface lets you quickly switch between different aspects of the resource while keeping all information accessible in one place. The active tab displays its content below, with the others remaining available for easy navigation.

The *Description* tab provides comprehensive information about the resource's purpose, scope, target topics, intended use and any special features.

The *Table of Contents* tab presents the resource structure as a hierarchical list of sections, chapters, modules or topics. Shown as bullets or numbered items, it reveals the internal organization and sequence, making it easier to identify specific coverage or entry points within longer materials or multi-session actions.

The *Material/Action Detail* tab provides technical and logistical specifics tailored to the resource type. For Training Materials, this includes Training Material Type, Prerequisites, Learning Outcomes, Type of Assessment and Interactivity Type. For Training Actions this includes Prerequisites, Related Materials, Learning Outcomes, Type of Assessment and Certification.

The *Additional Information* tab collects supplementary documentation and context: Source(s), Contributors, Audience, License, Organization & Division). For actions, Location appears with map integration.

6 Form view

A step-by-step wizard form is used to create new Training Materials/Actions or edit existing ones. Access the form via the floating *Create* button on the main view (tab-dependent) or the *Edit* button on a detail page (permission-based). The interface guides users through structured data entry with validation, ensuring complete and consistent resource descriptions.

Some fields adapt based on resource type (Training Material or Training Action), but the overall structure remains identical. Required fields are marked with asterisks (*) and validated on submission.

The screenshot displays the 'Create New Material' form, a multi-step wizard with four steps: 1. General Information (active), 2. Material Content, 3. Additional Information, and 4. User Account Information. The form includes the following fields and components:

- Title ***: A text input field containing 'Test Title' with an edit icon.
- Provided By ***: A text input field containing 'Test Provider' with a house icon.
- URL ***: A text input field containing 'https://www.test.com' with a link icon.
- Date Created ***: A date picker field showing '27/01/2026' with a calendar icon.
- Language ***: A dropdown menu showing 'English'.
- Description ***: A text area containing placeholder text, with a character count of '445 / 2000'.
- Abstract ***: A text area containing placeholder text, with a character count of '123 / 500'.
- Subjects ***: A multi-select field showing '2 items selected'. The selected items are 'Cartography and Visualization' (orange) and 'Conceptual Foundations' (blue).
- Creators ***: A multi-select field showing 'Creator 1' and 'Creator 2'.

At the bottom, there is a 'Return' button with a left arrow and a 'Next' button with a right arrow.

Figure 9: Training Catalogue Form.

6.1 How to fill in fields (input types)

The form combines different input widgets to make data entry faster and more consistent:

- **Text inputs:** single-line fields for short values (e.g., Title, URL).
- **Dropdown selectors:** choose from predefined values; some dropdowns also allow a custom value to be entered directly in the popover.
- **Multi-select dropdowns:** select multiple values; some dropdowns also allow a custom value to be entered directly in the popover; selected values are displayed as chips.
- **Chip inputs:** type a value and press Enter (or the + button) to add it as a chip; use this for lists such as Creators, Learning Outcomes, Contributors, etc.
- **BoK modal selector:** a dedicated selector to browse/search BoK concepts and add them as Knowledge Annotations.

6.2 Step 1: General Information

This step captures the core identification and discovery information for the resource. It includes:

- **Title *** (text input). A name given to the resource. Keep it short and descriptive so users can identify it in search results and cards.
- **Provided By *** (text input). The organization or company that makes the resource available or organizes the training activity. Enter the full name of your organization.
- **URL *** (text input). The web address where the resource can be accessed. Provide a valid URL to the content or landing page.
- **Date Created *** (date input). Date of creation of the resource (when originally created/finished, not published/modified).
- **Language *** (dropdown selector). A language of the resource.
- **Description *** (textarea, up to 2000 characters). A detailed overview of the resource. Include key topics, purpose, scope, features, audience; for actions, add price, max participants, start/end dates.
- **Abstract *** (textarea, up to 500 characters). A summary of the resource (shorter version of description). Focus on main purpose and key points.
- **Subjects *** (Multi-select dropdown). Topic of the resource. Select from GeoSpace BoK knowledge areas (e.g., AM Analytical Methods, GN GNSS, SC Satellite Communication); use "Other" and specify if needed.
- **Creators *** (chip input). Name of the person or persons primarily responsible for creating the resource. Fill in with the author(s).

6.3 Step 2: Material/Action Content

This step captures key educational characteristics used to classify and compare resources. It includes:

- **Workload *** (number input). The amount of time that students are expected to invest to meet defined learning outcomes, quantified using ECTS credits (1 ECTS = 25-30 hours total workload).
- **EQF Level *** (multi-select dropdown). European Qualifications Framework code indicating qualification level(s) targeted by the resource/action.
- **Target Audience *** (multi-select dropdown). The intended participants for the resource, from predefined educational/professional categories.
- **Type of Assessment *** (multi-select dropdown). The methods or tools used to evaluate and verify learners achievement of the Learning Outcomes.
- **Learning Outcomes *** (chip input). The specific skills, knowledge or competencies participants are expected to gain, expressed using Bloom's taxonomy action verbs.
- **Knowledge Annotations *** (BoK modal selector). Knowledge in terms of SpaceSUITE BoK concepts addressed in this resource (select 2-6 specific concepts).

When selecting Knowledge Annotations, choose specific concepts that best describe the content. As a guideline, select at least 2 and up to 6 concepts per resource.

6.3.1 Material Fields

- **License ***. Information about the license under which the resource is made available, specifying usage rights and conditions.
- **Interactivity Type ***. The predominant mode of learning supported by the learning resource.
- **Training Material Type ***. The nature or genre of the resource.

6.3.2 Action Fields

- **Certification ***. Information on whether participants will receive certification, accreditation, or micro-credential upon completion.
- **Microcredential Awarding Body *** (conditional). The institution, organization, or entity responsible for issuing or validating the micro-credential.

6.4 Step 3: Additional Information

This step captures supporting documentation and optional lists that enrich the description. It includes:

- **References & Sources** (textarea, max 500 chars). Related resource from which the described resource/action is derived (document, dataset, project, publication).
- **Prerequisites** (chip input). Required prior knowledge/skills/qualifications (degrees, programming skills, prior courses).
- **Table of Contents** (chip input). Main structural elements (chapters, lectures, sections) in ordered format.
- **Image** (file input). Representative image for card/detail view.

6.4.1 Material Fields

- **Contributors** (chip input). Individuals/organizations contributing to creation/development (co-authors, editors, illustrators, partners).

6.4.2 Action Fields

- **Location** (text input). Physical/geographical place where training action occurs (city, country, building, region - not URLs).
- **Related Materials** (multi-select/link input). Training Materials used/delivered during this training action.

6.5 Step 4: User Account Information

This step controls ownership and publication settings for the resource. It includes:

- **User *** (disabled input). Automatically filled with the currently logged-in user who is creating/publishing the resource. Cannot be edited.
- **Organization *** (dropdown selector). The organization responsible for publishing the resource, selected from authorized partner organizations in the SpaceSUITE ecosystem.
- **Division** (dropdown selector, optional). Sub-unit or department within the Organization. Only shows relevant divisions for selected Organization.
- **Public / Private** (toggle). Controls resource visibility: Public = discoverable by all users in Training Catalogue; Private = restricted to Organization/Division members only.

6.6 Saving changes

Use the *Next* and *Back* buttons to navigate between steps, and press *Submit* to save. If any required field is missing or invalid (for example, an invalid URL or missing mandatory selections), the form highlights the field and prevents submission until it is corrected. After submission, the resource becomes available in the catalogue according to its visibility setting.

A Glossary of Terms

BoK: Body of Knowledge. The complete set of concepts and relations between them that make up the GeoSpace domain (Earth Observation, GNSS, Satellite Communications, Satellite Systems), including related learning outcomes as defined by the SpaceSUITE project.

BoK tags: Colored labels representing knowledge areas and specific concepts from the GeoSpace BoK associated with a training resource. Tags adapt their display based on available space (full name, code only, or truncated).

EQF level: European Qualifications Framework level indicating the difficulty and expected prior knowledge required for the training resource (levels 1-8, from basic to doctorate).

RDF: Resource Description Framework. A standard format for structured metadata exports (Turtle, RDFa, RDF/XML) that enables machine-readable descriptions and interoperability with other systems.

Training Action: A concrete training event or activity with defined dates, such as a workshop, webinar, course or in-person session, typically targeting specific knowledge, skills or competencies.

Training Material: Reusable learning content such as slides, videos, documents, quizzes or online modules that support training delivery or self-study.

Training Resource: Individual learning asset used within a Training Material, such as a presentation, video, assignment description, quiz or reference document.
